## QUESTION

Let the probability density function of a random variable X be

$$f(x) = \begin{cases} x & 0 \le x < \frac{1}{2} \\ c(2x-1)^2 & \frac{1}{2} < x \le 1 \\ 0 & \text{otherwise} \end{cases}$$

then, the value of c is equal to \_\_\_\_\_.

### Solution

For a probability density function of a continuous random variable,

$$\int_{-\infty}^{\infty} f(x) \, dx = 1 \tag{0.0.1}$$

$$\int_{-\infty}^{\infty} f(x) dx = \int_{0}^{1/2} f(x) dx + \int_{1/2}^{1} f(x) dx \qquad (0.0.2)$$

$$= \int_{0}^{1/2} x dx + \int_{1/2}^{1} c(2x - 1)^{2} dx \qquad (0.0.3)$$

$$= \frac{x^{2}}{2} \Big|_{0}^{1/2} + c \left( \frac{4x^{3}}{3} - 2x^{2} + x \right) \Big|_{1/2}^{1} \qquad (0.0.4)$$

$$= \frac{1}{8} + c \left( \frac{1}{3} - \frac{1}{6} \right) \qquad (0.0.5)$$

$$1 = \frac{1}{8} + \frac{c}{6} \qquad (0.0.6)$$

$$\therefore c = \frac{21}{6} \qquad (0.0.7)$$

Graph of the function f(x) using python:
